

## Progress Report 1

For this progress report, please include the following in an .Rmd file (knit this to either html or pdf and submit the knit file). Only ONE group member needs to submit this report. Please upload it to the LMS.

1. A list of group members (minimum of two, maximum of four – all need to be in the same section). You can list the group members in the Author section of your YAML header.
2. A paragraph describing your potential research project. You can present one idea or multiple potential project ideas; but I want a paragraph for each idea that includes the following:
  - a. Your main research question:
    - i. Remember – we are focused on PREDICTION for this class. Keep that in mind as you draft your question(s).
  - b. Why this is an interesting/relevant question?
  - c. What sort of data you would need to answer this question? Do you have any ideas of appropriate datasets (Kaggle.com is a great resource; and of course – Google)?
    - i. If you have an idea of datasets, include some information on potential variables (DV and predictors) from the dataset.
